

Michael Fleck

(832) 859-7883 | michael.j.fleck@gmail.com

Summary

Front-end software engineer with experience building responsive, scalable interfaces using React, Angular, TypeScript, Tailwind CSS, and HTML/CSS. Experienced integrating REST APIs and building data-driven dashboards, with unit testing expertise using Jasmine/Karma. Passionate about creating intuitive user experiences and continuing to grow as a front-end developer.

SKILLS

JavaScript, React, TypeScript, Angular, Jasmine/Karma (Testing), Python, SQL (MySQL, Oracle), GraphQL, Airflow, ETL Pipelines, Google Cloud Platform (GCP), Node.js, REST APIs, HTML/CSS, Tailwind CSS, Jenkins, CI/CD, Deployment / Workflow Automation, Git, Jira, Agile (Scrum), Tableau, Grafana

WORK EXPERIENCE

Wells Fargo

May 2023 - Dec 2024

Software Engineer (Contract)

Charlotte, NC

- Led development and maintained a comprehensive reporting dashboard using Tableau, integrating multiple data sources via REST APIs, including MySQL databases and Splunk, to monitor memory, CPU, and storage usage across clusters and nodes
- Implemented product-wide unit testing using Karma and Jasmine, achieving >90% code coverage and ensuring the front-end application met and exceeded production release standards
- Leveraged Angular, TypeScript, and HTML5/CSS to implement responsive design improvements and optimize accessibility in support of key business objectives, and intuitive user experience
- Facilitated cloud migration through development of Directed Acyclic Graphs (DAGs) from on-premise systems to Google Cloud Platform using Airflow to orchestrate data pipelines from on-premise systems for the creation of stored procedures, views, and tables from existing data

Infosys

Jul 2022 - Feb 2025

Senior Associate

Charlotte, NC

- Trained in Java, Unix, Python, and Spark SQL as part of Infosys' consulting program
- Contracted to Wells Fargo after training to support an internal web application, implementing and fixing features for data management

Magnum Forge

Jan 2020 - July 2021

Analyst

Houston, TX

- Designed 15+ SQL views and SSRS reports and various queries to support and streamline financial tracking after ERP implementation
- Built Python ETL scripts (pandas) to transform and validate 10K+ ERP records, achieving 99.9% data accuracy with 40% faster migrations

Retail Information Systems

Dec 2018 - Dec 2019

Support Technician

Houston, TX

- Developed and optimized e-commerce solutions using PHP, JavaScript, and Oracle DB, significantly boosting sales and improving user experience
- Customized WordPress themes with HTML/CSS/JS, improving mobile conversion by 15%
- Provided technical support for 15+ retail clients, resolving 90% of issues within SLA

EDUCATION

Texas Tech University

BBA, Management Information Systems

Flatiron School

Software Engineering Live

PROJECTS

Swine App - Nonprofit Fundraising Platform

React, MySQL, Node.js, Express

Collaborated with a senior developer to create a fundraising platform for tracking donations for a Houston Rodeo nonprofit

- Designed React front-end to display dynamic fundraising data with clean user experience
- Built Express API to query MySQL and server event-specific fundraising stats and donation tracking

- Created reusable components to manage events, donor info, and progress tracking

Reddit Spotify Playlist Generator

Node.js, Express, PostgreSQL, Knex, Spotify API, Reddit API

Built a backend service that generates Spotify playlists from trending Reddit posts, leveraging API integrations and persistent token storage

- Implemented OAuth authentication flows for both Reddit and Spotify, securely storing and refreshing tokens
- Fetched top Reddit posts, parsed unstructured post titles to extract artist/title/genre/year using regex
- Searched Spotify's catalog via API and created user playlists with matched tracks
- Stored access tokens and expiration metadata using PostgreSQL and Knex.js
- Deployed backend server using Express, enabling dynamic playlist generation via /create-playlist endpoint

Plant Shop E-Commerce App

React, Node.js, Express, REST API, Tailwind CSS

Developed a full-stack plant shopping app with live product data pulled from the Trefle.io plant database

- Built a responsive React front-end styled with Tailwind CSS featuring plant search, filtering, and a dynamic cart system
- Created a Node.js + Express proxy server to securely interact with the Trefle API and avoid exposing API keys
- Implemented cart management using React hooks and context; enabled stateful navigation between product & cart pages
- Designed scalable front-end architecture to support future features like login, checkout, and OAuth integration
